

The Quick, Economical Method to Secure Hurricane Protection

The PanelMate® hurricane anchoring system, the most recognized name for anchoring hurricane shutters, allows fast and easy installation in concrete, block, or wood. Since its introduction, the PanelMate anchoring system has expanded not only to accommodate the various building materials and practices used in different geographical areas, but also to meet ever-changing building code requirements.

All PanelMate fasteners, except for the inserts, utilize the same oversized 14-10 V-notch thread design. This consistency can offer a simplified approach when determining appropriate anchoring requirements.

Key Features and Benefits

- System approach (fasteners and installation components) simplifies assembly to reduce costs
- All PanelMate anchors (except for PanelMate inserts) have the same special oversized 14-10 V-notched threads (.270 O.D.) to provide exceptional pull-out and shear values
- Carbon Steel designs have silver Stalgard® finish for outstanding corrosion resistance (withstand 1000 hours in salt spray testing per ASTM B117 standards)
